

**Manual-Manual**

Press **'Next'** to continue.

## *Step 1: Straighten Head*

- If your head is laterally tilted with respect to the trunk, the halo will be red:

- Slowly straighten your head on your shoulders. This will make the halo turn progressively from red to green:

- When the halo pops to bright green, hold this position.

## *Step 2: Acquire the Target Orientation*

- Once your head is aligned with your body, a yellow spherical target will appear. Raise your arm and point your hand towards the target such that the laser-pointer falls on the target.

- Rotate your hand in a rolling motion around the axis of your arm until the pointer and the tool turn bright green. Memorise the hand orientation.

- When the target disappears, lower your arm to your side.

### *Step 3: Tilt the Head*

- If the tunnel turns red, you must tilt your head to a new orientation. The arrow tells you which way to rotate the head.

- Roll your head from side to side until the tunnel turns bright green and hold this position.

### *Step 4: Align to Target*

- When the orange disk reappears, raise your arm and aim with the hand until the laser pointer falls on the disk.
- Rotate your hand in a rolling motion around the axis of your arm to the remembered target orientation.

**Note:** *In this phase the virtual tool gives no indication about the orientation of the hand around the roll axis. You must rotate the hand to the **remembered** orientation while pointing to the target in pitch and yaw.*

- With your left hand, press the center button on the Remote Control to validate your response once you think your hand is aligned with the memorised target.

*(Need an image of the Oculus Remote Control.)*

### *Step 5: Check Response*

- In some of the trials a line of target balls will be projected from your hand towards the targets, allowing you to verify whether or not you correctly aligned your hand.
